INTRODUCTION

The 1990 edition of *FLEET ACCIDENT RATES* is the summarized experience of organizations participating in the 1989 National Fleet Safety Contests. The contests are competitive award programs designed to promote safe driving by providing award recognition.

The program is open to all National Safety Council members and members of co-sponsoring associations whose fleets operate in the United States and Canada.

Data is collected on a monthly basis from January 1 - December 31 of each year. This data includes the cumulative number of miles driven, the cumulative number of accidents experienced, and the number of vehicles in the fleet.

An accident is defined as any incident involving death, injury, or property damage, unless the vehicle was properly parked. Accidents are reported regardless of the amount of property damage or preventability factors. More detailed guidelines can be found in the National Fleet Safety Contest Rules.

This booklet covers accident rates for motor transportation vehicles only. General information about industrial, motor vehicle, public and home accidents is presented in *Accident Facts,* published by the National Safety Council. Occupational injury and illness experiences are summarized and listed in a booklet similar to this one called *Work Injury and Illness Rates.*

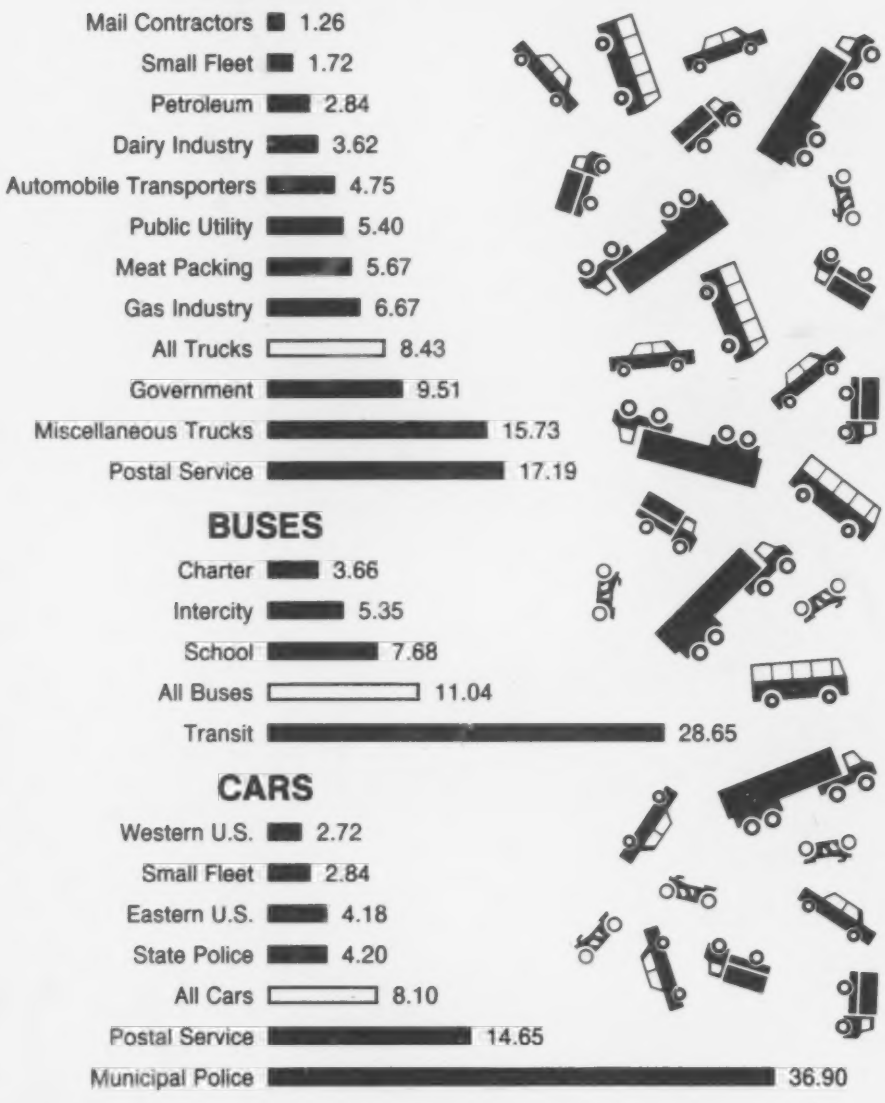
COMMENTS

In 1989, the experiences of 1,002 fleets were reported to the National Safety Council. These fleets traveled over 3.9 billion miles and reported 33,364 accidents.

The accident rates shown for the different types of motor vehicle operations reflect the average experience of the reporting organizations. However, it is not known to what extent these organizations represent the experience of all fleets in the United States and Canada. In some groups, where the number of fleets or the amount of miles is large, the experience may be fairly representative. In other groups, where the number of fleets or the amount of miles is small, it is very probable that the summarized data does not reflect the true average experience. Comparisons between the rates of the various groups should be made only with a realization of differences in coverage.

Every effort is made by the Council to utilize only accurate reports. Editing of data is done both manually and by computer. Questionable reports are returned for verification and not accepted until corrections or clarifications have been made. All participants in the National Fleet Safety Contests have agreed that their accident records are open to audit by personnel designated by the Fleet Contest Committee, if requested.

1989 Fleet Accident Rates
By Type of Vehicle and Operation



Source: Based on information submitted to the National Safety Council by participants of the National Fleet Safety Contests. Rates are accidents per 1,000,000 miles. These rates should not be interpreted as representative of the industries listed. Accidents are reported according to the guidelines of the National Fleet Safety Contest Rules.

[a]Accidents per 1,000,000 miles. Rates are only approximately comparable from year to year because of changes in the number of contestants.

[b]Excludes passenger cars operated by state and municipal police departments.

[c]Contest was changed to a calendar year format.

About the Awards

There are five different awards which can be earned by participation in the National Fleet Safety Contests. First, Second and Third Place awards are issued on the basis of rank within each group. The number of participants in the group determines if any or all three awards will be given. Co- sponsoring associations are also given the opportunity to issue additional First, Second or Third Place awards in groups where the number of participants was too low.

Recognition is also given to organizations having achieved a Perfect Record for the entire calendar year. In addition, reduction of an organization's accident rate in the current year in comparison to the two prior years' rates is recognized with the Certificate of Achievement award.
